

SEO RE-AUDIT

E Green Solution

egreensolution.in

Keyword Ownership, New Pages & Implementation Plan

Re-audited: 29 September 2026 | Public website crawl

Area	Status	Re-audit finding
Architecture	Improved	Dedicated installation, maintenance, location and blog clusters are now live.
Keyword targeting	Needs control	Several pages still compete for broad Pune solar terms.
Commercial intent	Gap	Commercial and industrial navigation currently point to the same page.
Trust / claims	Needs cleanup	Some certifications, guarantees and technical standards require evidence or safer wording.
Content growth	Positive	Service and location depth is much stronger than in the first audit.

Purpose of this report

Give Antigravity a precise implementation sequence, assign one search intent to each important URL, prevent keyword cannibalization, and make the next content changes in a controlled order.

Prepared as an implementation document - not just a list of SEO observations.

ANTIGRAVITY - READ THIS FIRST

Implementation mandate

Work in the order below. Do not mass-create new location pages before the existing money pages have unique keyword ownership, clean metadata, consistent claims, and correct internal links. Preserve existing URLs unless this report explicitly recommends a new page.

1

Freeze URL structure

Do not rename existing indexed URLs. Keep the current slugs and optimize the page content/metadata in place. Only add the new pages specifically recommended in this report.

2

Fix navigation intent

Create a dedicated /commercial-solar-pune page and change every “Commercial Solar” navigation link to it. Keep /industrial-solar focused on factories, MIDC, warehouses, HT/LT loads and industrial EPC.

3

Enforce keyword ownership

Use the master keyword map in this PDF. Each URL gets one primary keyword/topic. Do not make the homepage, Services, Pune City, Residential and Industrial pages all chase the same “solar company Pune / solar panel Pune” terms.

4

Rewrite titles, H1s and intros

Apply the recommended title/H1 direction. Keep the primary keyword in the title and H1 naturally, then write for users. Remove repetitive exact-match phrases from footers and generic boilerplate.

5

Clean factual and trust claims

Remove the IEC 61215 cleaning-protocol claim. Verify or soften “authorized”, “certified”, “MNRE approved/empanelled”, “BEE certified”, bank partnership, guaranteed approvals/subsidies, warranty and ROI claims unless documentary proof is available.

6

Standardize business proof

Choose the verified installation count, capacity, years in business, office details, phone, GST/entity details and partner claims. The live site currently shows materially different proof numbers across pages; use one source of truth.

7

Repair internal linking

Test all contextual links from blogs and location pages. Any dead /areas/... URLs should redirect to an existing relevant page or be replaced with the correct live URL. Do not leave internal 404s.

8

Build only the next high-value pages

After the above is complete, create /commercial-solar-pune and /solar-water-heater-pune. Add new location pages only where real local project proof and unique content are available.

9

Strengthen projects

Turn major installations into individual case studies with system size, location, client type, photos, equipment, commissioning date, generation/savings methodology and a verified testimonial when permitted.

10

Validate after deployment

Run a crawl, inspect canonical/indexability, regenerate the XML sitemap, request indexing for important changed pages, and compare impressions/clicks/query overlap in Google Search Console for 4-8 weeks.

Definition of done for Antigravity

- ✓ No primary keyword is assigned to two core landing pages.
- ✓ Commercial and Industrial Solar have separate URLs and distinct search intent.
- ✓ No internal link returns 404/soft-404.
- ✓ Titles and H1s are unique across the core site.
- ✓ Homepage and reusable footer no longer repeat “solar panel dealers Pune / solar panel installations Pune” unnaturally.
- ✓ All quantified claims are either verified or rewritten as qualified estimates.
- ✓ Search Console shows the intended page receiving impressions for its assigned query family.

1. Re-Audit Executive Summary

What improved since the first audit

- ✓ The website now has a much deeper service architecture: cleaning, AMC, repair, inverter repair, net-meter support and repowering each have dedicated landing pages.
- ✓ Local SEO coverage is stronger with Pune City, Chakan, PCMC, Baner/Bavdhan, Bhosari, Kiwale/Ravet and Lonavala-focused pages.
- ✓ The site now exposes clearer service categories and stronger internal navigation from the homepage.
- ✓ The previous Section 80D solar claim is no longer visible on the live homepage checked during this re-audit.
- ✓ The subsidy page is more tightly aligned to PM Surya Ghar search intent.

Most important remaining problems

Priority	Issue	What it means
HIGH	Commercial and Industrial pages are not separated	Commercial Solar and Industrial Solar navigation currently resolve to the same industrial URL, creating intent confusion.
HIGH	Broad-keyword cannibalization	Homepage, Services, Pune City and several location pages repeatedly use overlapping “solar panel Pune / solar installation Pune / best solar company Pune” language.
HIGH	Conflicting proof numbers	Homepage currently mentions 200+ homes while several location pages state 1,500+ installations. Standardize verified figures.
HIGH	Trust claims need evidence	Authorized/certified/MNRE/BEE/bank/warranty/guarantee statements should be documented or carefully qualified.
MEDIUM	Technical-standard misuse	The cleaning page currently calls IEC 61215 a PV maintenance standard; IEC 61215 is a module design qualification/type-approval standard, so the wording should be removed.
MEDIUM	Template SEO boilerplate	Many pages repeat the same “premier solar panel dealers Pune...” footer sentence, which weakens uniqueness and reads like SEO boilerplate.
MEDIUM	Location scale risk	The local architecture is useful, but mass-producing thin area pages would create doorway-page risk and internal duplication.
MEDIUM	Project proof underused	Named installations exist, but individual case studies would generate more authority, long-tail relevance and conversion trust.

Audit boundary

This is a public-site re-audit. Search Console index coverage, actual query impressions, GA4 conversions, server logs, backlink databases and field Core Web Vitals were not available inside the public crawl. Those data sources should be used during implementation validation, not guessed from the public site.

2. Keyword Architecture: One Page = One Primary Intent

Core rule

The primary keyword identifies the page's main search intent. Secondary keywords support that topic; they are not instructions to repeat exact-match phrases. The same primary keyword should not be pushed on multiple pages.

URL	Primary keyword	Secondary/supporting	Role / instruction
/	solar panel dealers Pune	solar company Pune; solar panel company Pune; solar dealers Pune	Brand/category authority page. Reduce "installation Pune" repetition.
/solar-panel-pune	solar panel installation Pune	rooftop solar Pune; solar installer Pune; solar installation company Pune	Main Pune installation landing page.
/services	solar services Pune	solar EPC services Pune; solar maintenance services Pune	Services hub, not the main "solar company Pune" page.
/residential-solar	solar panels for home Pune	residential solar Pune; rooftop solar for home Pune; 3kW/5kW solar Pune	Own homeowner/residential intent.
/commercial-solar-pune (NEW)	commercial solar installation Pune	commercial rooftop solar Pune; solar for offices/hospitals/malls	Create separate from Industrial.
/industrial-solar	industrial solar installation Pune	industrial solar EPC Pune; factory solar Pune; industrial rooftop solar	Factories, warehouses, MIDC, C&I engineering.
/solar-subsidy	solar subsidy Pune	PM Surya Ghar Pune; rooftop solar subsidy Pune; solar subsidy Maharashtra	Subsidy authority page.
/calculator	solar calculator Pune	solar savings calculator; solar ROI calculator; solar system size calculator	Tool/estimate intent.
/projects	solar projects Pune	solar EPC projects Pune; solar installation case studies	Portfolio hub; link to individual case studies.
/areas	solar installation service areas Pune	solar service areas Pune; solar company near me Pune/PCMC	Area directory/hub, not a keyword-stuffed landing page.
/solar-guide	solar energy guide	how solar panels work; rooftop solar guide India	Informational hub.
/about	E Green Solution Pune	solar energy company Pune; E Green Solution	Brand/entity page.
/contact	E Green Solution contact	solar site survey Pune; solar company contact Pune	Transactional/contact intent.

3. Maintenance & After-Sales Keyword Map

URL	Primary keyword	Secondary/supporting	Instruction
/solar-panel-cleaning-pune	solar panel cleaning Pune	solar cleaning service Pune; solar panel washing Pune; solar cleaning PCMC	Keep focused on cleaning/soiling. Remove IEC 61215 “maintenance standard” wording.
/solar-amc-pune	solar AMC Pune	solar AMC contractors Pune; solar annual maintenance contract Pune	AMC/annual contract intent.
/solar-repair-maintenance-pune	solar panel repair Pune	solar plant maintenance Pune; solar system repair Pune	Fault finding + repair, not AMC.
/solar-inverter-repair-pune	solar inverter repair Pune	solar inverter service Pune; Growatt/Sungrow/Solis/Fronius repair	Inverter-specific problem intent.
/solar-net-meter-msedcl-pune	MSEDCL solar net meter Pune	solar net meter problem Pune; net meter replacement Pune; export credit issue	Utility/meter troubleshooting intent.
/solar-plant-revamping-repowering	solar plant repowering Maharashtra	solar plant revamping Pune; old solar plant upgrade	Upgrade/repower older assets.

Important content separation

- Cleaning should talk about soiling, safe washing, frequency, water quality and before/after generation checks - not broad solar installation terms.
- AMC should own recurring preventive service, inspection schedules and SLA language.
- Repair should own breakdown/fault intent; Inverter Repair should be even narrower and brand/problem specific.
- Net Meter should focus on MSEDCL process, meter testing/replacement, export-credit problems and billing mismatch.
- Repowering should target older/underperforming plants, module/inverter upgrades and capacity optimization.

4. Location Page Keyword Map

URL	Primary keyword	Secondary/supporting	Page differentiation
/solar-panel-pune	solar panel installation Pune	rooftop solar installation Pune; solar installer Pune	Citywide installation page. Do not duplicate homepage dealer intent.
/solar-panel-chakan	solar panel installation Chakan MIDC	industrial solar Chakan; solar EPC Chakan; factory solar Chakan	Industrial/MIDC emphasis.
/solar-panel-pimpri-chinchwad	solar panel installation Pimpri Chinchwad	solar company PCMC; rooftop solar PCMC; residential solar PCMC	Mixed residential/commercial PCMC intent.
/solar-panel-baner-bavdhan	solar panel installation Baner	solar installation Bavdhan; rooftop solar Baner; solar for bungalow Baner	West Pune premium residential intent.
/solar-panel-bhosari-pcmc	industrial solar Bhosari MIDC	solar EPC Bhosari; factory solar Bhosari; commercial solar Bhosari	Industrial first; avoid general PCMC duplication.
/solar-panel-kiwale	solar panel installation Kiwale	solar panels Ravet; rooftop solar Ravet; solar installation Mamurdi	Residential growth-corridor intent.
/solar-panel-lonavala	solar panel installation Lonavala	hybrid solar Lonavala; solar for villa/resort; battery solar Lonavala	Differentiate through villas/resorts/hybrid systems.

Location pages to consider next - only with unique proof

Proposed URL	Primary keyword	Gate before publishing
/solar-panel-wakad-hinjewadi	solar panel installation Wakad / Hinjewadi	Create only if you have local projects, photos, testimonials or measurable examples.
/solar-panel-kharadi-hadapsar	solar panel installation Kharadi / Hadapsar	Strong East Pune commercial/residential cluster if supported by real evidence.
/solar-panel-kothrud	solar panel installation Kothrud	Worth creating if you can show local residential/society work.
/solar-panel-talegaon-midc	industrial solar Talegaon MIDC	High-value industrial intent; use factory-specific proof.
/solar-panel-ranjangaon-midc	industrial solar Ranjangaon MIDC	High-value industrial intent; use industrial case studies and local utility details.

Do not mass-produce locality pages

A local page should earn its existence with genuinely local information: project photography, client story, roof/building types, local MSSEDCL context, pricing examples, generation data, FAQs and/or a case study. Otherwise keep the locality inside /areas.

5. Blog / Informational Keyword Map

URL	Primary keyword	Secondary/supporting	Internal-link role
/blog/bifacial-solar-panels-pune	bifacial solar panels Pune	bifacial vs monofacial; bifacial rooftop solar	Link to Residential + Industrial depending use case.
/blog/mono-perc-vs-topcon-solar-pune	Mono PERC vs TOPCon solar panels	TOPCon vs PERC; best solar panel technology	Comparison/informational intent; do not chase “solar company Pune”.
/blog/dcr-solar-panels-pune	DCR solar panels Pune	DCR panels for PM Surya Ghar; domestic content solar	Link strongly to subsidy page.
/blog/hybrid-solar-system-lithium-battery-pune	hybrid solar system Pune	lithium battery solar Pune; solar backup Pune	Link to Residential and Lonavala where relevant.
/blog/enphase-microinverter-installers-pune	Enphase microinverter Pune	microinverter Pune; Enphase installer Pune	Use “authorized” only with verifiable partner proof.
/blog/on-grid-solar-inverter-dealers-pune	on grid solar inverter Pune	solar inverter brands Pune; grid-tie inverter Pune	Informational/commercial-assist intent; link to inverter repair + installations.
/blog/elevated-rooftop-solar-structure-pune	elevated solar structure Pune	elevated solar mounting Pune; rooftop solar structure	Link to Baner/Bavdhan, Residential and relevant case studies.

Blog rule

Blogs should answer informational/comparison questions and funnel authority to the relevant money page. Do not convert every article into another “best solar company in Pune” landing page. Keep commercial CTAs, but preserve the informational search intent.

6. Recommended Titles & H1 Direction

URL	Recommended title direction	Recommended H1 direction
/	Solar Panel Dealers Pune Rooftop Solar - E Green Solution	Solar Panel Dealers in Pune
/solar-panel-pune	Solar Panel Installation Pune Rooftop Solar - E Green Solution	Solar Panel Installation in Pune
/services	Solar Services Pune EPC, AMC & Repair - E Green Solution	Solar Services in Pune
/residential-solar	Solar Panels for Home Pune Residential Rooftop Solar	Solar Panels for Home in Pune
/commercial-solar-pune	Commercial Solar Installation Pune E Green Solution	Commercial Solar Installation in Pune
/industrial-solar	Industrial Solar Installation Pune Factory Solar EPC	Industrial Solar Installation & EPC in Pune
/solar-subsidy	Solar Subsidy Pune 2026 PM Surya Ghar Guide	Solar Subsidy in Pune - PM Surya Ghar Guide
/calculator	Solar Calculator Pune Savings, ROI & System Size	Solar Savings & ROI Calculator
/projects	Solar Projects Pune Rooftop & Industrial Case Studies	Solar Projects & Case Studies in Pune
/areas	Solar Installation Service Areas Pune & PCMC	Solar Installation Service Areas in Pune & PCMC
/solar-panel-cleaning-pune	Solar Panel Cleaning Pune Rooftop & Industrial Service	Solar Panel Cleaning Services in Pune
/solar-amc-pune	Solar AMC Pune Annual Solar Maintenance Contracts	Solar AMC Contractors in Pune
/solar-repair-maintenance-pune	Solar Panel Repair Pune Plant Maintenance & Fault Service	Solar Panel Repair & Maintenance in Pune
/solar-inverter-repair-pune	Solar Inverter Repair Pune Growatt, Sungrow, Solis & More	Solar Inverter Repair in Pune
/solar-net-meter-msedcl-pune	MSSEDCL Solar Net Meter Pune Testing & Replacement	MSSEDCL Solar Net Meter Testing & Replacement
/solar-plant-revamping-repowering	Solar Plant Repowering Maharashtra Revamping & Upgrade	Solar Plant Revamping & Repowering
/solar-panel-chakan	Solar Panel Installation Chakan MIDC Factory Solar EPC	Solar Panel Installation in Chakan MIDC
/solar-panel-pimpri-chinchwad	Solar Panel Installation Pimpri Chinchwad PCMC	Solar Panel Installation in Pimpri Chinchwad
/solar-panel-baner-bavdhan	Solar Panel Installation Baner & Bavdhan Pune	Solar Panel Installation in Baner & Bavdhan
/solar-panel-bhosari-pcmc	Industrial Solar Bhosari MIDC Factory Rooftop EPC	Industrial Solar Installation in Bhosari MIDC
/solar-panel-kiwale	Solar Panel Installation Kiwale & Ravet Pune	Solar Panel Installation in Kiwale & Ravet
/solar-panel-lonavala	Solar Panel Installation Lonavala Villas, Resorts & Hybrid	Solar Panel Installation in Lonavala & Khandala

7. Meta Description Direction for Core Money Pages

Page	Recommended meta description
/	Looking for solar panel dealers in Pune? E Green Solution supplies and installs rooftop solar for homes, societies and businesses with end-to-end MSEDCL support.
/solar-panel-pune	Get rooftop solar panel installation in Pune with site survey, system design, MSEDCL net-metering support and residential or commercial options.
/residential-solar	Install rooftop solar for your Pune home or housing society. Compare 3kW, 5kW and larger systems, subsidy support, savings and installation process.
/commercial-solar-pune	Commercial solar installation in Pune for offices, hospitals, hotels, malls and institutions. Get a site assessment, savings estimate and EPC proposal.
/industrial-solar	Industrial solar EPC in Pune for factories, warehouses and MIDC units. System design, engineering, compliance support, monitoring and maintenance.
/solar-subsidy	Understand PM Surya Ghar solar subsidy in Pune, current residential subsidy slabs, eligibility, MSEDCL steps and the application process.
/solar-panel-cleaning-pune	Professional solar panel cleaning in Pune for homes, societies and industrial plants using safe low-TDS water and generation checks.
/solar-amc-pune	Solar AMC in Pune with preventive inspections, electrical checks, cleaning options and breakdown support for residential, commercial and industrial plants.
/projects	Explore E Green Solution solar projects in Pune and Maharashtra, including residential, commercial and industrial rooftop installations and case studies.

Metadata note

Do not force exact-match keywords into every sentence. Titles, H1s and the opening paragraph should make the page intent unmistakable; the rest of the page should use natural language, entity terms and problem/solution vocabulary.

8. Live Re-Audit: High-Confidence Fixes

Issue	Observed pattern	Antigravity action
Commercial navigation overlap	The “Commercial Solar” and “Industrial Solar EPC” navigation items currently route to the same /industrial-solar URL.	Create /commercial-solar-pune and point commercial links there.
Homepage keyword repetition	Homepage repeatedly uses “solar panel dealers Pune” and “solar panel installations Pune” in headings/body/footer.	Keep one clear H1 and natural supporting usage. Remove templated exact-match footer text.
Services keyword overlap	/services uses “best solar company in Pune” and “solar panel installations in Pune” while linking to child pages.	Turn Services into a true service hub targeting “solar services Pune”.
Installation-count inconsistency	Homepage references 200+ homes while multiple location pages state 1,500+ commissioned/successful installations.	Choose verified metrics and use them consistently across all pages.
IEC 61215 wording	Cleaning page currently states that its cleaning protocol follows “IEC 61215 PV maintenance standards”.	Remove this claim; describe your actual cleaning SOP and manufacturer-safe practices instead.
Aggressive guarantee language	Pages use wording such as guaranteed approval/subsidy/generation/ROI.	Replace guarantees with documented service commitments or qualified estimates unless contractual proof exists.
Certification/authorization proof	The site uses “authorized”, “certified”, “MNRE approved/empanelled”, “BEE certified” and partner language.	Publish verifiable certificates/partner evidence or soften the language.
Tax/ROI claims	40% depreciation and fast payback are used as broad selling points.	State eligibility/assumptions clearly and recommend professional tax advice; do not imply a universal cash tax saving.
Reusable footer SEO boilerplate	Many pages reuse the same “premier solar panel dealers Pune...” sentence.	Replace with one neutral brand description; keep page-specific keywords in unique body copy.
Location-page similarity	Several location pages use nearly identical cost tables, proof blocks and boilerplate.	Add genuinely local project proof and unique FAQs; avoid launching more thin variants.

9. New Pages to Build - In This Order

Order	URL / asset	Primary keyword	Why	Priority
1	/commercial-solar-pune	commercial solar installation Pune	Separate offices, hospitals, hotels, schools, malls and institutions from factory/MIDC intent.	HIGH
2	/solar-water-heater-pune	solar water heater Pune	The site sells/describes solar water heating but lacks a dedicated high-quality landing page on the main domain.	HIGH
3	Project case studies	[project name] + [capacity] + [location]	Turn major projects into proof assets and long-tail landing pages.	HIGH
4	/solar-panel-wakad-hinjewadi	solar panel installation Wakad / Hinjewadi	Create only with unique local project proof.	CONDITIONAL
5	/solar-panel-kharadi-hadapsar	solar panel installation Kharadi / Hadapsar	Create only with unique local project proof.	CONDITIONAL
6	/solar-panel-talegaon-midc	industrial solar Talegaon MIDC	High-value industrial page if real local evidence exists.	CONDITIONAL
7	/solar-panel-ranjangaon-midc	industrial solar Ranjangaon MIDC	High-value industrial page if real local evidence exists.	CONDITIONAL

Commercial page content blueprint

- H1: Commercial Solar Installation in Pune
- Audience sections: offices, hospitals, hotels, schools/colleges, retail/malls, institutions and commercial complexes.
- Include load profile, daytime consumption, roof type, system-size examples, financing/opex options only if actually offered, net-metering context and maintenance.
- Use commercial project examples and CTAs distinct from industrial/MIDC engineering.
- Link to Industrial Solar only where a user has factory/warehouse/large C&I requirements.

Solar water heater page content blueprint

- Primary keyword: solar water heater Pune.
- Cover ETC/FPC systems only if supplied, common capacities, residential vs commercial use, hotel/hospital applications, installation requirements and maintenance.
- Avoid calling products “MNRE approved” unless you can cite the exact applicable certification/approval.
- Add real product/project photos and a specific enquiry form for litre/day requirement.

10. Internal Linking Blueprint

Source	Link to	Purpose
Homepage	Residential, Commercial, Industrial, Subsidy, Cleaning/AMC, Pune installation, Areas	Homepage distributes authority to major business categories.
Residential	Subsidy, Calculator, Baner/Bavdhan, Kiwale/Ravet, Lonavala, Residential project case studies	Moves homeowners from information to estimate/proof.
Commercial	Calculator/quote, Subsidy only where eligible and relevant, Projects, AMC, Cleaning	Commercial intent must not be routed into Industrial by default.
Industrial	Chakan, Bhosari, Talegaon/Ranjangaon when live, AMC, Repair, Repowering, Industrial case studies	Build a strong C&I/MIDC cluster.
Subsidy	Residential, DCR article, Calculator, Net-meter page	Subsidy page is the main PM Surya Ghar authority URL.
Maintenance pages	Cross-link Cleaning ↔ AMC ↔ Repair ↔ Inverter ↔ Net Meter ↔ Repowering	Create a coherent after-sales cluster.
Blog articles	1 relevant money page + 1 related article + 1 location/case study where natural	Do not overload articles with unrelated commercial anchors.
Location pages	Relevant service page + one local/related project case study + Areas hub	Use descriptive anchors; avoid exact same anchor sitewide.

Anchor-text guidance

- Use descriptive natural anchors such as “residential rooftop solar”, “solar AMC plans”, “MSDCL net meter testing” and “industrial solar EPC”.
- Avoid using the exact primary keyword as the anchor for every link to a page.
- Contextual links inside unique body content are more useful than large blocks of repetitive keyword links in footers.

11. Trust, E-E-A-T & Local SEO Cleanup

Area	Recommended action
Business identity	Keep one canonical legal/business name, main phone, GST/entity details, founding year/experience claim and primary address across the website and business listings.
Offices/branches	Mark genuine branches clearly; do not present multiple locations as interchangeable business identities.
Certifications	Create a verifiable credentials section with certificate name, issuing body, certificate/partner number where appropriate and current validity.
Warranty	Clarify which party provides each warranty: module manufacturer, inverter maker, E Green Solution workmanship, structure, etc.
Projects	Publish date, capacity, client type, location, system components, photos and measurable performance methodology.
Reviews	Link or embed genuine Google reviews and ask clients for service/location-specific reviews without scripting misleading content.
Financial claims	Show assumptions: tariff, generation estimate, degradation, subsidy eligibility and tax treatment. Avoid universal promises.
Author/reviewer	For technical guides, add an author/reviewer bio with real solar engineering experience and credentials.

Important improvement already observed

The Section 80D solar statement from the earlier audit is no longer visible on the live homepage checked on 29 September 2026. Keep it removed.

12. Project Case-Study SEO Framework

Use the existing named projects as authority pages, not just gallery cards. Examples already surfaced on the site include Eagle Burgmann (200 kW) and Bhagawati Industries (140 kW).

Field	Recommendation
Suggested URL	/projects/eagle-burgmann-200kw-solar-pune
Primary keyword	200kW industrial solar project Pune
Title direction	200kW Industrial Solar Project Pune Eagle Burgmann Case Study
H1	200kW Industrial Rooftop Solar Project - Eagle Burgmann
Proof to add	Commissioning date, roof area, system size, module/inverter, generation estimate vs actual, project photos, engineering challenge, safety/compliance work, client testimonial if approved.
Internal links	Industrial Solar, relevant MIDC/location page, AMC/maintenance if applicable, Projects hub.

Case-study template

- Problem / load profile and business objective
- Site conditions and engineering constraints
- System design: kW, module, inverter, structure, safety and monitoring
- Installation timeline and approvals
- Generation / savings methodology with assumptions
- Commissioning photographs and close-up technical proof
- Outcome, maintenance plan and customer quote where permitted

13. Content Rewrite Rules for Antigravity

Rule	Implementation standard
Use primary keyword	Title, H1, opening paragraph and one relevant subheading. Natural variants elsewhere.
Avoid stuffing	Do not repeatedly write “solar panel installations Pune” or “best solar company Pune” to force relevance.
Use entities	Mention MSEDCL, PM Surya Ghar, rooftop types, module/inverter categories, MIDC zones and real project details where genuinely relevant.
Quantify carefully	Any %, ROI, payback, yield, savings, warranty or response-time number should have a defensible basis and assumptions.
Differentiate pages	Each service/location page needs information that would still be useful if the city keyword were removed.
Do not overclaim	Replace “guaranteed approval/subsidy” with process-support language unless it is contractually guaranteed and within your control.
Keep CTAs specific	Residential: bill/site survey. Commercial: load/roof assessment. Industrial: technical EPC assessment. Maintenance: plant size + fault/service request.
Use FAQs selectively	Answer real user questions; do not repeat the same five FAQs on every location page.

14. Technical SEO Validation Checklist After Changes

- ✓ Crawl the full site and confirm all important pages return HTTP 200.
- ✓ Fix every internal 3xx chain, 404 and soft-404; update links to final destination URLs.
- ✓ Confirm one self-referencing canonical on each indexable landing page.
- ✓ Confirm no money page is accidentally noindex/nofollow.
- ✓ Regenerate and validate XML sitemap; include only canonical, indexable 200-status URLs.
- ✓ Verify robots.txt does not block CSS/JS or important page paths.
- ✓ Check title, meta description and H1 uniqueness across the crawl.
- ✓ Validate Organization/LocalBusiness, Breadcrumb and relevant structured data against visible page content.
- ✓ Test Core Web Vitals/PageSpeed on Home, Residential, Industrial, Pune, Subsidy and one heavy location page.
- ✓ Compress/resize project photography; use descriptive alt text without keyword stuffing.
- ✓ Submit changed/new URLs in Search Console and monitor index status.
- ✓ Compare Search Console queries by landing page to detect cannibalization after 4-8 weeks.

What Search Console should show after successful implementation

Query family	Preferred landing page
solar panel dealers Pune	/
solar panel installation Pune	/solar-panel-pune
solar panels for home Pune	/residential-solar
commercial solar installation Pune	/commercial-solar-pune
industrial solar installation Pune	/industrial-solar
solar subsidy Pune	/solar-subsidy
solar panel cleaning Pune	/solar-panel-cleaning-pune
solar AMC Pune	/solar-amc-pune

15. 30 / 60 / 90-Day SEO Roadmap

Timing	Actions
Days 1-7	Fix navigation overlap; remove/qualify risky claims; standardize proof metrics; repair internal broken links; remove repeated footer keyword boilerplate.
Days 8-21	Implement keyword ownership, title/H1 rewrites and intros on all core/service/location pages. Update internal linking and structured data.
Days 22-30	Launch /commercial-solar-pune and /solar-water-heater-pune if content, proof and conversion assets are ready.
Days 31-60	Publish 3-5 detailed project case studies. Improve existing location pages with unique project proof and local FAQs.
Days 61-90	Expand only the best-supported new local/industrial pages. Build comparison/helpful blog content around real Search Console query opportunities.
Ongoing	Monthly crawl + Search Console review: impressions, CTR, position, landing-page overlap, indexed pages, conversions and lead quality.

Highest leverage sequence

Clean up the existing site first → split Commercial from Industrial → lock keyword ownership → strengthen project proof → then expand locations/content based on Search Console evidence.

Method / limitations

Recommendations are based on the public live website and search-intent architecture. Exact search volume, ranking difficulty, conversion rate and current organic query ownership require Google Search Console, GA4 and/or a dedicated keyword database. The keyword map is designed first to remove intent overlap and build a coherent architecture; it should then be refined with first-party Search Console data.

Final implementation priority

Do this before adding dozens of new pages

Separate Commercial vs Industrial, fix trust/claim inconsistencies, standardize proof metrics, remove boilerplate keyword repetition, enforce the URL-to-keyword map, repair internal links, and publish real project case studies. Expansion should come after the foundation is clean.
